

Web 2.0 for Differentiation

Through assessment, modifying teaching and expectations to meet the needs of all children in a classroom. *Sarah Martabano.*

Differentiated instruction does not change WHAT is taught; it changes HOW it is taught. *Basia Hall.*

Three components that are most notably associated with differentiation are: content--what is being taught; process--how it is being taught; and product--tangible results produced based on student's interests and abilities. *Susan Dinnocenti*

Web 2.0 is a term describing the trend in the use of the world wide web and web design to enhance creativity, information sharing, and collaboration among users. *Wikipedia*

Web 1.0 was all about connecting people. It was an interactive space, and I think Web 2.0 is of course a piece of jargon, nobody even knows what it means. If Web 2.0 for you is blogs and wikis, then that is people to people. But that was what the Web was supposed to be all along. *Tim Berners-Lee*

The pedagogy of weblogs

- Weblogs are a constructivist tool for learning
- Collaboration is diverse - connecting with people outside the classroom
- Blogs archive learning - facilitating reflection
- It is a democratic tool supporting different learning styles
- Shy students add their voice to the class through their writing
- Blogs teach students new literacies they need in the new information society
